Storm Data Export Format, Field names

Event Details File (named event_details_YYYYMM.csv):

last_date_modified Ex: 4/4/2012 11:05:44 PM, 5/3/2012 5:10:49 AM MM/DD/YYYY 12 hour time AM/PM

The last date of modification by NWS. Any corrections to the storm event/episode in question are made solely by NWS and the person that actually entered the event/episode.

last_date_certified Ex: 5/10/2012 9:10:51 AM, 5/18/2012 12:21:15 AM MM/DD/YYYY 12 hour time AM/PM

The last date of certification by NWS. Any corrections to the storm event/episode in question are made solely by NWS and the person that actually entered the event/episode.

episode id Ex: 61280, 62777, 63250

(ID assigned by NWS to denote the storm episode; links the event details file with the information within location file)

The occurrence of storms and other significant weather phenomena having sufficient intensity to cause loss of life, injuries, significant property damage, and/or disruption to commerce. Rare, unusual, weather phenomena that generate media attention, such as snow flurries in South Florida or the San Diego coastal area; and Other significant meteorological events, such as record maximum or minimum temperatures or precipitation that occur in connection with another event.

event id Ex: 383097, 374427, 364175

(Primary database key field)

(ID assigned by NWS to note a single, small part that goes into a specific storm episode; links the storm episode between the three files downloaded from SPC's website)

state Ex: GEORGIA, WYOMING, COLORADO

The state name where the event occurred (no State ID's are included here; State Name is spelled out in ALL CAPS)

state_fips Ex: 45, 30, 12

A unique number (State Federal Information Processing Standard) is assigned to the county by the National Institute for Standards and Technology (NIST).

year Ex: 2000, 2006, 2012

month_name Ex: January, February, March

Name of the month for the event in this record (spelled out; not abbreviated)

event_type Ex: Hail, Thunderstorm Wind, Snow, Ice (spelled out; not abbreviated)

The only events permitted in Storm Data are listed in Table 1 of Section 2.1.1 of NWS Directive 10-1605 at http://www.nws.noaa.gov/directives/sym/pd01016005curr.pdf. The chosen event name should be the one that most accurately describes the meteorological event leading to fatalities, injuries, damage, etc. However, significant events, such as tornadoes, having no impact or causing no damage, should also be included in Storm Data.

From Section 2.1.1 of NWS Directive 10-1605:

Lake-Effect Snow Z

Event Name Designator (County or Zone)
Lakeshore Flood Z
Lightning C
Marine Hail M
Marine High Wind M
Marine Strong Wind M
Marine Thunderstorm Wind M
Rip Current Z
Seiche Z
Sleet Z
Storm Surge/Tide Z
Strong Wind Z
Thunderstorm Wind C
Tornado C
Tropical Depression Z
Tropical Storm Z
Tsunami Z
Volcanic Ash Z
Waterspout M
Wildfire Z
Winter Storm Z
Winter Weather Z

cz_type Ex: C, Z, M

Indicates whether the event happened in a (C) county/parish, (Z) zone or (M) marine

cz fips Ex: 245, 003, 155

The county FIPS number is a unique number assigned to the county by the National Institute for Standards and Technology (NIST) or NWS Forecast Zone Number (See addendum)

cz_name Ex: AIKEN, RICHMOND, BAXTER (County/Parish, Zone or Marine Name assigned to the county FIPS number or NWS Forecast Zone)

wfo Ex: CAE, BYZ, GJT (National Weather Service Forecast Office's area of responsibility (County Warning Area) in which the event occurred)

begin_date_time Ex: 4/1/2012 20:48 MM/DD/YYYY 24 hour time AM/PM

cz_timezone Ex: EST-5, MST-7, CST-6

(Time Zone for the County/Parish, Zone or Marine Name)

Eastern Standard Time (EST), Central Standard Time (CST), Mountain Standard Time (MST), etc.

end_date_time Ex: 4/1/2012 21:03 MM/DD/YYYY 24 hour time AM/PM

injuries_direct Ex: 1, 0, 56

The number of injuries directly related to the weather event

injuries_indirect Ex: 0, 15, 87

The number of injuries indirectly related to the weather event

deaths direct Ex: 0, 45, 23

The number of deaths directly related to the weather event.

deaths_indirect Ex: 0, 4, 6

The number of deaths indirectly related to the weather event

damage_property Ex: 10.00K, 0.00K, 10.00M

The estimated amount of damage to property incurred by the weather event. (e.g. 10.00K = \$10,000; 10.00M = \$10,000,000)

damage crops Ex: 0.00K, 500.00K, 15.00M

The estimated amount of damage to crops incurred by the weather event (e.g. 10.00K = \$10,000; 10.00M = \$10,000,000)

source Ex: Public, Newspaper, Law Enforcement, Broadcast Media, ASOS, Park and Forest Service, Trained Spotter, CoCoRaHS, etc. (can be any entry; isn't restricted in what's allowed) Source reporting the weather event

magnitude Ex: 0.75, 60, 0.88, 2.75

measured extent of the magnitude type \sim only used for wind speeds and hail size (e.g. 0.75" of hail; 60 mph winds)

magnitude type Ex: EG, MS, MG, ES

EG = Wind Estimated Gust; ES = Estimated Sustained Wind; MS = Measured Sustained Wind; MG = Measured Wind Gust (no magnitude is included for instances of hail)

flood_cause Ex: Ice Jam, Heavy Rain, Heavy Rain/Snow Melt Reported or estimated cause of the flood

category Ex:

Unknown (During the time of downloading this particular file, NCDC has never seen anything provided within this field.)

tor f scale Ex: EF0, EF1, EF2, EF3, EF4, EF5

Enhanced Fujita Scale describes the strength of the tornado based on the amount and type of damage caused by the tornado. The F-scale of damage will vary in the destruction area; therefore, the highest value of the F-scale is recorded for each event.

EFO - Light Damage (40 - 72 mph)

EF1 – Moderate Damage (73 – 112 mph)

EF2 – Significant damage (113 – 157 mph)

EF3 – Severe Damage (158 – 206 mph)

EF4 – Devastating Damage (207 – 260 mph)

EF5 – Incredible Damage (261 – 318 mph)

tor length Ex: 0.66, 1.05, 0.48

Length of the tornado or tornado segment while on the ground (minimal of tenths of miles)

tor width Ex: 25, 50, 2640, 10

Width of the tornado or tornado segment while on the ground (in feet)

tor other wfo Ex: DDC, ICT, TOP, OAX

Indicates the continuation of a tornado segment as it crossed from one National Weather Service Forecast Office to another. The subsequent WFO identifier is provided within this field.

tor_other_cz_state Ex: KS, NE, OK

The two character representation for the state name of the continuing tornado segment as it crossed from one county or zone to another. The subsequent 2-Letter State ID is provided within this field.

tor_other_cz_fips Ex: 41, 127, 153

The FIPS number of the county entered by the continuing tornado segment as it crossed from one county to another. The subsequent FIPS number is provided within this field.

tor_other_cz_name Ex: DICKINSON, NEMAHA, SARPY

The FIPS name of the county entered by the continuing tornado segment as it crossed from one county to another. The subsequent county or zone name is provided within this field in ALL CAPS.

episode_title Ex: Severe weather outbreak on Saturday April 14 in eastern Nebraska A short description of the episode. (Short name for the episode itself as determined by NWS.)

episode_narrative (The episode narrative depicting the general nature and overall activity of the episode. The narrative is created by NWS.) Ex: A strong upper level system over the southern Rockies lifted northeast across the plains causing an intense surface low pressure system and attendant warm front to lift into Nebraska.

event_narrative (The event narrative provides more specific details of the individual event . The event narrative is provided by NWS.) Ex: Heavy rain caused flash flooding across parts of Wilber. Rainfall of 2 to 3 inches fell across the area.

Storm Data Location File (named event_locations_YYYYMM.csv):

episode_id Ex: 60904 (ID assigned by NWS to denote the storm episode; links the storm episode with the information within the event details file) An Episode may contain several different events.

event_id Ex: 364000, 364001, 364002, 364003 (ID assigned by NWS to note a single, small part that goes into a specific storm episode; links the storm episode between the three files downloaded from SPC's website)

location_index Ex: 1-x (Number assigned by NWS to specific locations within the same Storm event. Each event's sequentially increasing location index number will have a corresponding lat/lon point)

range Ex: 0.59, 0.69, 4.84, 1.17 {A hydro-meteorological event will be referenced, minimally, to the nearest tenth of a mile, to the geographical center (not from the village/city boundaries or limits) of a particular village/city, airport, or inland lake, providing that the reference point is documented in the Storm Data software location database. }

azimuth Ex: ENE, NW, WSW, S {16-point compass direction from a particular village/city, airport, or inland lake, providing that the reference point is documented in the Storm Data software location database of > 130,000 locations.}

location Ex: PINELAND, CENTER, ORRS, RUSK {center from which the range is calculated and the azimuth is determined}

lat Ex: 31.25, 31.79, 32.76, 31.80

The latitude where the event occurred {rounded to the hundredths in decimal degrees; includes an '-' if it's S of the Equator}

Ion Ex: -93.97, -94.18, -94.52, -95.13

The longitude where the event occurred {rounded to the hundredths in decimal degrees; includes an '-' if it's W of the Prime Meridian}

Storm Data Fatality File (named event_fatalities_YYYYMM.csv):

fatality_id Ex: 17582, 17590, 17597, 18222 (ID assigned by NWS to denote the individual fatality that occurred within a storm event)

event_id Ex: 364302, 365560, 365945, 367330 (ID assigned by NWS to note a single, small part that goes into a specific storm episode; links the storm episode between the three files downloaded from SPC's website)

fatality_type Ex: D, I (D = Direct Fatality; I = Indirect Fatality; assignment of this is determined by NWS software; details below are from NWS Directve 10-1605 at http://www.nws.noaa.gov/directives/sym/pd01016005curr.pdf, Section 2.6)

- Direct Fatality: "A direct fatality or injury is defined as a fatality or injury directly attributable to the hydro-meteorological event itself, or impact by airborne/falling/moving debris, i.e., missiles generated by wind, water, ice, lightning, tornado, etc. "
- Indirect Fatality: "Fatalities and injuries, occurring in the vicinity of a
 hydrometeorological event, or after it has ended, but not directly caused by impact or
 debris from the event (weather event was a passive entity), are classified as indirect."

fatality_date Ex: 4/3/2012 12:00:00 AM, 4/11/2012 12:00:00 AM

MM/DD/YYYY 12 hour time AM/PM

fatality_age Ex: 38, 25, 69, 54

The age of the fatalities

fatality sex Ex: M, F

The gender of the fatalities

fatality_location Ex: Under Tree, Boating, Vehicle/Towed Trailer
